

# TRAIN CAR TOP LOADING ARM

The long reach top loading and unloading arms are the most common choices for loading liquids on a train car. The pneumatic cylinder and several swivels make the arms easy and ergonomic to use. This top loading arm is designed to streamline the loading process but also improve the safety when working with potentially hazardous chemicals.

Our loading arms are tailored for customers needs - there is a wide range of optional equipment and functions to be selected. Overfilling can be prevented with overfilling sensor and harmful vapors can be collected with the integrated vapor extractor line.

These long reach loading arms are CE marked products according to EU directive of machinery 2006/42/EC. They also fulfill the requirements of "Metallic industrial piping, EN 13480-1-4:2017" and pressure equipment directive 2014/68/EU (PED). The versions fulfilling EX requirements are available upon request.
